**Care Goals**

Our goal is to provide current, evidence-based, individualized care to relieve, reduce, or manage pain. By mediating pain, patients are assisted in maintaining an improved quality of life by increasing their ability to function. In many cases, patients are able to return to normal activity.

**Our Process**

After initial consultation, an individualized treatment plan is implemented with the assistance of our professional office staff. The plan of care may include medication management, interventional procedures, and pain management infusion services. Minimally invasive, x-ray guided diagnostic and therapeutic procedures are available in our comfortable, private suite and are utilized as part of a multi-disciplinary approach. Referrals for conservative therapy may also be part of the plan. Additional referrals may be coordinated as indicated for neurosurgery, neurology, behavioral management, chiropractic care, physiatry, or orthopedics.

---
