What is Multiple Sclerosis?
Multiple Sclerosis (MS) is caused by damage to the myelin sheath, the protective covering that surrounds nerve cells. When this nerve covering is damaged, nerve signals slow down or stop.

The nerve damage is caused by inflammation that occurs when the body's own immune cells attack the nervous system. This can occur along any area of the brain, optic nerve, or spinal cord.

Early Symptoms of MS
No two people have exactly the same symptoms. Some common ones include:
• blurred or double vision
• thinking or memory problems
• numbness or tingling
• balance problems
• poor coordination
• weakness in one or more body parts
• fatigue
• urinary problems (difficulty or urgency)

Neurology Care for MS
The Division of Neurology at Riverhills Neuroscience has in-depth understanding and experience with Multiple Sclerosis. For over 40 years, Riverhills Neuroscience has been working with MS patients, frequently providing:
• MS diagnosis
• Courses of care for MS — including disease modifying therapies, treatments for attacks, and symptom management
• Answers to medical questions, prescriptions, and help with disability-related issues
• Coordinated care with other Riverhills departments and specialists

Comprehensive Services
Our Neurologists coordinate closely with a larger team of Riverhills specialists to provide:

Diagnostics / MRI
Riverhills state-of-the-art MRI center provides superior brain and spine imaging. Images are interpreted within 24 hours by a radiologist who is specially trained in MR neuroradiology.

Rehabilitation Services
Riverhills coordinates with trusted wellness professionals that are highly experienced in the unique needs of MS patients. Physical Therapists can help with strength, flexibility, and mobility issues; they may also instruct on use of assistive devices and mobility aids. Occupational Therapists help patients maintain the highest level of independence. They may even perform in-home visits to evaluate needs for safety and mobility.

Behavioral Medicine
A Psychologist with specialized experience with Multiple Sclerosis is available to assist patients psychological stresses associated with MS. Additionally, a Neuropsychologist may be consulted to determine any impact on cognitive functions such as attention or memory.

Infusion Therapy
Some patients benefit from medications delivered by IV infusion. Riverhills operates one of the largest MS infusion centers in Ohio. We offer convenient pre-authorization services to coordinate appointments, insurance, and billing.

Patient Advocacy
We work closely with our local MS Society, who often help with information on Medicare and Medicaid, transportation, accessible housing, and local MS support groups.

This unified group of care specialists communicate frequently to provide coordinated, integrated care. This often provides a more satisfying experience for our MS patients.

We are here to help.
