- Muscle Biopsy

Infusion
Riverhills’ Infusion Center offers infusion therapy for those instances when no oral medication is available or when patients are unable to receive traditional therapeutic agents. Intravenous medications are often used to treat Multiple Sclerosis and autoimmune disorders, as well as to manage pain. Riverhills Neuroscience is proud to operate one of the largest neurology infusion centers in Ohio.

Diagnostics
Imaging is critical to an efficient and accurate diagnosis. Riverhills has the key advantage of an on-site MRI to aid our physicians in the diagnosis and care of each individual patient. Our facility is accredited by the American College of Radiology. MRI scans are read by board certified radiologists and neuroradiologists who specialize in neurologic and musculoskeletal imaging.

Research
Riverhills’ involvement in research studies keeps our physicians up-to-date on the latest treatment options available to patients with neurological conditions. Our neurologists have experience conducting clinical trials for Multiple Sclerosis, Parkinson’s, Alzheimer’s, Epilepsy, and more. Participation in research studies allows patients to take an active role in their own health and receive the most advanced treatments for their conditions (often free of charge).

Compassionate Care
Riverhills Neuroscience provides comprehensive, compassionate care for patients with neurological disorders and diseases. Each physician brings his or her unique personality, compassion, and depth of learning to the treatment of these challenging conditions. Patients take comfort knowing that they have access to the newest, most promising solutions for complex neurological disorders.

“We bring the most advanced, evidence-based care to each patient.”
