Services
- Electromyography (EMG)
- Nerve Conduction Velocities (NCV)
- Trigger Point Injections
- Spine Rehabilitation
- Medical Marijuana

Spine Rehabilitation
When possible, non-surgical care is performed before consideration of spine surgery. Non-invasive measures such as physical therapy (including exercise and traction), injections, and anti-inflammatory or pain medicine may be used. Early use of non-surgical spine care can speed up the healing process.

Post-Operative Rehabilitation
Our rehabilitation department works closely with the entire team of physicians to develop custom rehabilitation protocols tailored for each patient’s specific surgical procedure. Post-operative rehabilitation enhances recovery, facilitating an earlier and safer return to occupational and recreational activities.

Medical Marijuana
Physical Medicine & Rehabilitation specialist, Dr. Janalee K. Rissover, is certified to recommend medical marijuana for qualifying medical conditions. Patients must undergo a complete evaluation to determine if medical marijuana is appropriate for their course of care. Patients must have a physician referral in order to be evaluated for medical marijuana.

Coordinated Care
Rehabilitation services are located within our Norwood office suite. Dr. Rissover works closely with our entire team of neurologists, neurosurgeons, pain management specialists, rheumatology, and related neuroscience physicians.
